

Lab Assignment-03

Task-01

For task 1 we divided the array and recursively did that then we sent the two parts to the merge function and sorted them and put them into a list.

Task-02

For this task we divided the array and recursively did that and found the max number between the two numbers and repeated the process.

Task-03

For this task we took the first value and compared it with the other value. As long as we got lesser values we counted the number then when we got a greater number we started the same process and continued.

Task-04

For this task first I used divide and conquer approach then got the maximum possible output.

Task-05

For this task we took the first value as the pivot value and compared the numbers with the pivot numbers and the smaller numbers went to the left and the greater number to the right.

Task-06

For this task I first partitioned the array then did the quick sort to get the needed result.
